Elements of a Theory of Hermeneutic Experience

1 THE ELEVATION OF THE HISTORICITY OF UNDERSTANDING TO THE STATUS OF A HERMENEUTIC PRINCIPLE

(A) THE HERMENEUTIC CIRCLE AND THE PROBLEM OF PREJUDICES

(i) Heidegger’s Disclosure of the Fore-Structure of Understanding

Heidegger entered into the problems of historical hermeneutics as a critique only in order to explicate the fore-structure of understanding for the purposes of ontology. Our question, by contrast, is how hermeneutics, once freed from the ontological obstructions of the scientific concept of objectivity, can do justice to the historicity of understanding. Hermeneutics has traditionally understood itself as an art or technique. This is true even of Dilthey’s expansion of hermeneutics into an organon of the humanities. One might wonder whether there is such an art or technique of understanding—we shall come back to the point. But at any rate we can inquire into the consequences for the hermeneutics of the human sciences of the fact that Heidegger derives the circular structure of understanding from the temporality of Dasein. These consequences do not need to be true such that a theory is applied to practice so that the latter is performed differently—i.e., in a way that is technically correct. They could also consist in correcting (and refining) the way in which constantly exercised understanding understands itself—a process that would benefit the art of understanding at most only indirectly.
A person who is trying to understand is exposed to distraction from false meanings that are not borne out by the things themselves. Working on appropriate projections, anticipatory in nature, to be confirmed by the things themselves is the constant task of understanding. Indeed, what characterizes the arbitrariness of inappropriate fore-meanings if not that they come to nothing in being worked out? A genuine understanding realizes its full potential only when the fore-meanings to which it begins are not arbitrary. Thus it is quite right for the interpreter not to approach the text directly, relying solely on the fore-meaning already available to him, but rather explicitly to examine the legitimacy—i.e., the origin and validity—of the fore-meanings dwelling within him.

This basic requirement must be seen as the radicalization of a procedure we believe that we frequently exercise whenever we understand anything. Every reader presents the task of not simply leaving our own linguistic usage unexamined—or in the case of a foreign language the usage that we are familiar with from writers or from daily intercourse. Rather, we regard our task as deriving our understanding of the text from the linguistic usage of the text or of the author. The question is, of course, how this general requirement can be fulfilled. Especially in the field of semantics we are confronted with the problem that our own use of language is unconscious. How do we discover that there is a difference between our own customary usage and that of the text?

I think we must say that generally we do so in the experience of being pulled up short by the text. Either it does not yield any meaning at all, or its meaning is not compatible with what we had expected. This is what brings us up short and alerts us to a possible difference in usage. Someone who speaks the same language as I do uses the words in the sense familiar to me—this is a general presupposition that can be questioned only in particular cases. The same thing is true in the case of a foreign language, and in all we think we have a standard knowledge of it and assume this standard usage when we are reading a text.

What is true of fore-meanings that stem from usage, however, is equally true of the fore-meanings concerning content with which we read texts and which make up our fore-understanding. Here too we may ask how we can break the spell of our own fore-meanings. There can, of course, be a general expectation that what the text says will fit perfectly with our own meanings and expectations. But what another person tells me, whether in conversation, letter, book, or whatever, is generally supposed to be his own opinion; and this is what I am to take note of without necessarily having to share it. Yet this presupposition is not something that makes understanding easier, but harder, since the fore-meanings that determine my own understanding can go entirely unnoticed. If they give rise to misunderstandings, how can our misunderstandings of a text be detected at all if there is nothing to contradict them? How can a text be resisted against misunderstanding from the start?

If we examine the situation more closely, however, we find that misunderstandings cannot be understood in an arbitrary way. Just as we cannot continuously misunderstand the use of a word without its affecting the meaning of the whole, so we cannot stick blindly to our own fore-meaning about the thing if we want to understand the meaning of another. Of course, this does not mean that when we listen to someone or read a book we must forget all our fore-meanings concerning the content and all our ideas. All that is asked is that we remain open to the meaning of the other person or text. But this openness always includes our situating the other meaning in relation to the whole of our own meanings or ourselves and ideas. The hermeneutical task becomes thus a questioning of fore-meanings and is always in part so defined. This places hermeneutical work on a firm basis (A person trying to understand something will not resign himself from the start to relying on his own accidental fore-meanings, interpreting as consistently and stubbornly as possible the actual meaning of the text until the latter becomes so persistently audible that it breaks through what the interpreter imagines it to be. Rather, a person trying to understand a text is prepared for it to tell him something. That is why a hermeneutically trained consciousness must be, from the start, sensitive to the text's alterity. But this kind of sensitivity involves neither "neutrality" with respect to content nor the extinction of one's self, but the foregrounding and appropriation of one's own fore-meanings and prejudices. The important thing is to be aware of one's own bias, so that the text can...
present itself in all its otherness and thus assert its own truth against
own fore-meanings.

When Heidegger disclosed the fore-structure of understanding in what
considered merely "reading what is there," this was a completely con-
phenomenological description. He also exemplified the task that follows
from this. In Being and Time he gave the general hermeneutical problem
concrete form in the question of being. In order to explain the her-
eutical situation of the question of being in terms of fore-having, fore-
sight, and fore-conception, he critically tested his question, directed
metaphysics, on important turning points in the history of metaphysics.
Here he was only doing what historical-hermeneutical consciousness
requires in every case. Methodologically conscious understanding will
concerned not merely to form anticipatory ideas, but to make the
conscious, so as to check them and thus acquire right understanding from
the things themselves. This is what Heidegger means when he talks about
making our scientific theme "secure" by deriving our fore-having, fore-
sight and fore-conception from the things themselves.

It is not at all a matter of securing ourselves against the tradition the
speaks out of the text then, but, on the contrary, of excluding everyth-
that could hinder us from understanding it in terms of the subject mate-
It is the tyranny of hidden prejudices that makes us deaf to what speaks
us in tradition. Heidegger's demonstration that the concept of conscious-
ness in Descartes and of spirit in Hegel is still influenced by Greek
substance ontology, which sees being in terms of what is present, un-
dedly surpasses the self-understanding of modern metaphysics, yet not in
arbitrary, willful way, but on the basis of a "fore-having" that in fact makes
this tradition intelligible by revealing the ontological premises of the
concept of subjectivity. On the other hand, Heidegger discovers in Kant's
critique of "dogmatic" metaphysics the idea of a metaphysics of finity
which is a challenge to his own ontological scheme. Thus he "secures" his
scientific theme by framing it in terms of understanding tradition and
putting it, in a sense, at risk. All of this is a concretization of the histori-
consciousness involved in understanding.

The recognition that all understanding inevitably involves some preju-
dice gives the hermeneutical problem its real thrust. In light of this ins-
seems the idea of "hermeneutics," despite its critique of rationalism and of natural
philosophy, is based on the modern Enlightenment and unwittingly shares
prejudices. And there is one prejudice of the Enlightenment that defines
prejudice itself, which denies tradition its power.

The history of ideas shows that not until the Enlightenment does the
crimest of prejudice acquire the negative connotation familiar today. Actually
"prejudice" means a judgment that is rendered before all the elements that
determine a situation have been finally examined. In German legal
terminology a "prejudice" is a provisional legal verdict before the final
decision is reached. For someone involved in a legal dispute, this kind of
judgment against him affects his chances adversely. Accordingly, the
Latin "praedictum" as well as the Latin praecidium, means simply "disadvo-
disadvantage," "harm." But this negative sense is only derivative.

Negative consequence depends precisely on the positive validity, the
validity of the provisional decision as a prejudgment, like that of any pre-
judgment.

Thus "prejudice" certainly does not necessarily mean a false judgment,
and yet it is clear that the idea of a prejudgment has no foundation in the things themselves—i.e., that it is unfounded. This conclusion follows only in the spirit of rationalism. It is
the reason for discrediting prejudices and the reason scientific knowledge
seems to exclude them completely.

In adopting this principle, modern science is following the rule of
modernism: Cartesian doubt, accepting nothing as certain that can in any way be
put into question, and adopting the idea of method that follows from this rule. In
our introductory observations we have already pointed out how difficult it
is to harmonize the historical knowledge that helps to shape our historical
consciousness with this ideal and how difficult it is, for that reason, to
comprehend its true nature on the basis of the modern conception of
method. This is the place to turn those negative statements into positive
ones. The concept of "prejudice" is where we can start.
TRUTH AND METHOD

(ii) The Discrediting of Prejudice by the Enlightenment

If we consider the Enlightenment doctrine of prejudice, we find that it makes the following division: we must make a basic distinction between the prejudice due to human authority and that due to overenthusiasm. This distinction is based on the origin of prejudices in the persons who hold them. Either the respect we have for others and their authority leads us into error, or else an overenthusiasm in ourselves. That authority is a source of prejudices accords with the well-known principle of the Enlightenment that Kant formulated: Have the courage to make use of your own understanding. Although this distinction is certainly not limited to the role that prejudices play in understanding texts, its chief application lies in the sphere of hermeneutics, for Enlightenment critique is primarily directed against the religious tradition of Christianity—i.e., the Bible—treating the Bible as a historical document, biblical criticism endangers own dogmatic claims. This is the real radicality of the modern Enlightenment compared to all other movements of enlightenment: it must argue itself against the Bible and dogmatic interpretation of it. It is therefore particularly concerned with the hermeneutical problem. It wants to understand tradition correctly—i.e., rationally and without prejudice. There is a difficulty about this, since the sheer fact that something is written down gives it special authority. It is not altogether easy to realize that what is written down can be untrue. The written word has a tangible quality of something that can be demonstrated and is like a proof. It requires a special critical effort to free oneself from the prejudice in favor of what is written down and to distinguish here also, no less than in the case of oral assertions, between opinion and truth. In general, the Enlightenment tends to accept no authority and to decide everything before the judgment seat of reason. Thus the written tradition of Scripture, like any other historical document, can claim no absolute validity: the possible truth of the tradition depends on the credibility that reason accords it. It is not tradition but reason that constitutes the ultimate source of all authority. What is written down is not necessarily true. We can know better: this is the maxim with which the modern Enlightenment approaches tradition and which ultimately leads it to undertake historical research. It takes tradition as an object of critique, just as the natural sciences do with the evidence of the senses. This does not necessarily mean that the "prejudice against prejudices" was everywhere taken to its extremes of free thinking and atheism, as in England and France. On the contrary, the German Enlightenment recognized the "true prejudices" of the Christian religion. Since the human intellect is too weak to manage without prejudices, it is at least fortunate to have been educated with true prejudices.

It would be valuable to investigate to what extent this kind of modification and moderation of the Enlightenment prepared the way for the rise of the romantic movement in Germany, as undoubtedly did the critique of Enlightenment and the revolution by Edmund Burke. But none of this changes the fundamental fact. True prejudices must still finally be justified by personal knowledge, even though the task can never be fully completed. Thus the criteria of the modern Enlightenment still determine the self-understanding of historicism. They do so not directly, but through a previous refraction caused by romanticism. This can be seen with particular clarity in the fundamental schema of the philosophy of history that romanticism shares with the Enlightenment and that precisely through the romantic reaction to the Enlightenment became an unshakable premise: the schema of the conquest of mythos by logos. What gives this schema its validity is the presupposition of the progressive retreat of magic in history. It is supposed to represent progress in the history of the mind, and precisely because romanticism disparages this development, it takes over the schema itself as a self-evident truth. It shares the presupposition of the Enlightenment and only reverses its values, seeking to establish the reality of what is old simply on the fact that it is old: the "gothic" Middle Ages, the Christian European community of states, the permanent structure of society, but also the simplicity of peasant life and closeness to nature.

In contrast to the Enlightenment's faith in perfection, which thinks in terms of complete freedom from "superstition" and the prejudices of the past, we now find that olden times—the world of myth, unreflective life, the world of Christian chivalry—all these acquire a romantic magic, even a Romanticity over truth. Reversing the Enlightenment's presupposition results in the paradoxical tendency toward restoration—i.e., the tendency to construct the old because it is old, the conscious return to the unconscious, culminating in the recognition of the superior wisdom of the primeval age of myth. But the romantic reversal of the Enlightenment's criteria of value actually perpetuates the abstract contrast between myth and reason. All criticism of the Enlightenment now proceeds via this romantic mirror image of the Enlightenment. Belief in the perfectibility of
reason suddenly changes into the perfection of the "mythical" consciousness and finds itself reflected in a paraisiacal primal state before the fall of thought.\(^{13}\)

In fact the presupposition of a mysterious darkness in which there was a mythical collective consciousness that preceded all thought is justly dogmatic and abstract as that of a state of perfect enlightenment or absolute knowledge. Primeval wisdom is only the counterfeit of "primal stupidity." All mythical consciousness is still knowledge, and if it knew about divine powers, then it has progressed beyond mere trembling before power (if this is to be regarded as the primeval state), but also beyond collective life contained in magic rituals (as we find in the early Orient), knows about itself, and in this knowledge it is no longer simply outside itself.\(^{14}\)

There is the related point that even the contrast between genuinely mythical thinking and pseudomythical poetic thinking is a romantic illusion based on a prejudice of the Enlightenment: namely that the poet no longer shares the binding quality of myth because it is a creation of the free imagination. It is the old quarrel between the poets and the philosophers in the modern garb appropriate to the age of belief in science. It is now said, not that poets tell lies, but that they are incapable of saying anything true; they have only an aesthetic effect and, through their imaginative creations, they merely seek to stimulate the imagination and vitality of their hearers or readers.

Another case of romantic refraction is probably to be found in the concept of an "organic society," which Ladendorf says was introduced by H. Leo.\(^{15}\) In terms of this fourfold of the new natural sciences during the Enlightenment, is universalized and radicalized in the historical experience. This is the point at which the attempt to critique historical hermeneutics into start. The overcoming of all prejudices, this global demand of the enlightenment, will itself prove to be a prejudice, and removing it opens up an appropriate understanding of the finitude which dominates only our humanity but also our historical consciousness.
which Kant, under the influence of the skeptical critique of Hume, limit the claims of rationalism to the a priori element in the knowledge of nature; it is still true of historical consciousness and the possibility of historical knowledge. For that man is concerned here with himself and his own creations (Vico) is only an apparent solution of the problem posed by historical knowledge. Man is alien to himself and his historical fate is not a way quite different from the way nature, which knows nothing of him, is alien to him.

The epistemological question must be asked here in a fundamentally different way. We have shown above that Dilthey probably saw this, but was not able to escape his entanglement in traditional epistemology. Since he started from the awareness of “experiences” (Erlebnisse), he was unable to build a bridge to the historical realities, because the great historical realities of society and state always have a predetermine influence on any “experience.” Self-reflection and autobiography—Dilthey’s standpoint points—are not primary and are therefore not an adequate basis for a hermeneutical problem, because through them history is made primary once more. In fact history does not belong to us; we belong to it. Only when we understand ourselves through the process of self-examination, do we understand ourselves in a self-evident way in the family, society and state in which we live. The focus of subjectivity is a distorting mirror of self-awareness of the individual is only a flickering in the closed circuits of historical life. What is why the prejudices of the individual, far more than judgments, constitute the historical reality of his being.

(b) PREJUDICES AS CONDITIONS OF UNDERSTANDING

(i) The Rehabilitation of Authority and Tradition

Here is the point of departure for the hermeneutical problem. This is where we examined the Enlightenment’s discreditation of the concept of “prejudice.” What appears to be a limiting prejudice from the viewpoint of absolute self-construction of reason in fact belongs to historical reality itself. If we want to do justice to man’s finite, historical mode of being, we must acknowledge the fact that there are legitimate prejudices. Thus we can formulate the fundamental epistemological question for a truly historical hermeneutics as follows: what is the ground of the legitimacy of prejudices? What distinguishes legitimate prejudices from the countless others which it is the undeniable task of critical reason to overcome?

...
TRUTH AND METHOD

hermeneutics was freed from all dogmatic ties, the old division returned to validity. This is the meaning that we find in the language critical of a new guise. Thus Schleiermacher distinguishes between partiality and modern dictorship.

not this the essence of authority. Admittedly, it is primarily in the one that has authority but the authority of persons is ultimately not on the subject of dictatorial of reason but on an act of knowledge and knowledge—the knowledge, namely, that the other

this was implied in the concept of authority in the first place. His alleged partiality of the traditional division of prejudices documents the victory of the Enlightenment. Partiality now means only an individual limitation: understanding: "The one-sided preference for what is close to one's sphere of ideas."

In fact, however, the decisive question is concealed behind the concept of partiality. That the prejudices determining what I think are due to my own partiality is a judgment based on the standpoint of their having been dissolved and enlightened, and it holds only for unjustified prejudices. On the other hand, there are justified prejudices productive of knowledge.

then we are back to the problem of authority. Hence the radical consequences of the Enlightenment, which are still to be found in Schleiermacher's faith in method, are not tenable.

The Enlightenment's distinction between faith in authority and one's own reason is, in itself, legitimate. If the prestige of authority displaces one's own judgment, then authority is in fact a source of prejudice. But this does not preclude its being a source of truth, and it is what the Enlightenment failed to see when it denigrated all authority. It be convinced of this, we need only consider one of the greatest forerunners of the European Enlightenment, namely Descartes. Despite the radical of his methodological thinking, we know that Descartes excluded mountains from the total reconstruction of all truths by reason. This was what was meant by his provisional morality. It seems to me symptomatic that he not in fact elaborate his definitive morality and that its principles, as we can judge from his letters to Elizabeth, contain hardly anything new. It is obviously unthinkable to defer morality until modern science is entirely finished. That which has been sanctioned by tradition and custom is always power over our attitudes and behavior. All education depends on this, and even though, in the case of education, the educator loses his function when his charge comes of age.
and sets his own insight and decisions in the place of the authority of the educator, becoming mature does not mean that a person becomes the master in the sense that he is freed from all tradition. The real moral authority, for example, is based on tradition. They are freely taken over by no means created by a free insight or grounded on reasons. That is precisely what we call tradition: the ground of their validity. And in this lies the romanticism that we owe this correction of the Enlightenment. All tradition has a justification that lies beyond rational grounding and in this measure determines our institutions and attitudes. What makes our ethics superior to modern moral philosophy is that it grounds the transition from ethics to "politics," the art of right legislation, on its indispensability of tradition. By comparison, the modern Enlightenment is abstract and revolutionary.

The concept of tradition, however, has become less ambiguous in that of authority, and for the same reason—namely that what determines the romantic understanding of tradition is its abstract opposition to the principle of enlightenment. Romanticism conceives of tradition as an antithesis to the freedom of reason and regards it as something historically given, like nature. And whether one wants to be revolutionary and oppose it or preserve it, tradition is still viewed as the abstract opposite of freedom within this determinism, since its validity does not require any reasons but determinations us without our questioning it. Of course, the romantic critique of the Enlightenment is not an instance of tradition’s automatic dominance over tradition, of its persisting unaffected by doubt and criticism. Rather, this particular critical attitude again addresses itself to the truth of tradition and seeks to renew it. We can call it "traditionalism."

It seems to me, however, that there is no such unconditional antimorality between tradition and reason. However problematic the concept of tradition may be in the restoration of old or the creation of new traditions may be, the romantic faith in the "growth of tradition," before which all reason must remain silent, is fundamentally like the Enlightenment, and just as prejudiced. The fact is that in tradition there is always an element of freedom and of history itself. Even the most genuine and pure tradition does not persist because the inertia of what once existed. It needs to be affirmed, embraced, cultivated. It is, essentially, preservation, and it is active in all historical change. But preservation is an act of reason, though an unconscious one.

For this reason, only innovation and planning appear to be the real reason. But this is an illusion. Even where life changes violently, as in revolution, far more of the old is preserved in the supposed transformation than anyone knows, and it combines with the new to produce a new value. At any rate, preservation is as much a freely chosen act as revolution is an imposed. That is why both the Enlightenment’s critique of tradition and the romantic rehabilitation of it lag behind their true historical being.

One's thoughts raise the question of whether in the hermeneutics of the human sciences the element of tradition should not be given its full value. The specific nature of the human sciences cannot regard itself as an absolute entity, as a category of the past. At the same time, our usual relationship to the past is not characterized by breaking and freeing ourselves from tradition. Rather, we are always living within traditions, and this is a no objectifying process—i.e., we do not conceive of what tradition says as something other, something alien. It is always part of us, a model or exemplar, a kind of cognizance that our historical judgment would hardly regard as a kind of knowledge but the most ingenious affinity with tradition.

Experience in general in regard to the dominant epistemological methodology we have is that the rise of historical consciousness really divorced our relationship from this natural relation to the past. Does understanding in the human sciences understand itself correctly when it relegates the whole own historicality to the position of prejudices from which we must set ourselves? Or does "unprejudiced scholarship" share more than it to be with that naive openness and reflection in which traditions live? Is the past present?

In any case, understanding in the human sciences shares one fundamental condition with the life of tradition: it lets itself be addressed by tradition. Is it not true of the objects that the human sciences investigate, for the contents of tradition, that they are really about can be experienced only when one is addressed by them? However mediated this remains, historical interest may be, and though it may proceed from a historical interest in determining the significance of what is examined. But the existence of the historical task itself exists at the beginning of any such research as well as at the beginning of all historical hermeneutics, then, the abstract antithesis between tradition and historical research, between history and the knowledge of it,
must be discarded. The effect (Wirkung) of a living tradition and the effect of historical study must constitute a unity of effect. The analysis of what would reveal only a texture of reciprocal effects. Hence we would do well to regard historical consciousness as something radically new. Even a historian, and he therefore made judgments that were not at first—but as a new element in what has always constituted the human relation to the past. In other words, we have to recognize an element of tradition in historical research and inquire into its hermeneutics and productivity.

That an element of tradition affects the human sciences despite methodological purity of their procedures, an element that consists in the real nature and distinguishing mark, in the history of research and note the difference between the human and natural sciences with regard to their history. Of course not the finite historical endeavors can completely erase the traces of their finitude. The history of mathematics or of the natural sciences is also a part of the history of the human spirit and reflects its destinies. Nevertheless, it is evident that these aspects do not simply cancel one another out as research proceeds, but are like mutually exclusive conditions that exist by themselves and combine only in us. Our historical consciousness is always filled with a variety of voices in which the echo of the past is heard. Only in the history of the present is the multiplicity of such voices does it exist: this constitutes the nature of wrong turnings are of historical interest only, because the progress of research is the self-evident standard of research. Thus it is only in the research itself and the handing down of tradition. We secondary interest to see how advances in the natural sciences to the moment in history at which they took place were, a new experience of history whenever the past resounds in a new voice. This interest does not affect the epistemic value of discoveries in the natural fields.

There is, then, no need to deny that elements of tradition can also exist in the natural sciences—e.g., particular lines of research are preferential in particular places. But scientific research as such derives the law of development not from these circumstances but from the law of the object it is investigating, which conceals its methodical efforts.

It is clear that the human sciences cannot be adequately described in terms of this conception of research and progress. Of course it is possible to write a history of the solution of a problem—e.g., the deciphering of legible inscriptions—in which the only interest is in ultimately reaching the final result. Were this not so, it would have been impossible for the human sciences to have borrowed the methodology of the natural sciences happened in the last century. But what the human sciences share with the natural is only a subordinate element of the work done in the human sciences.

---

This is shown by the fact that the great achievements in the human sciences almost never become outdated. A modern reader can easily make allowances for the fact that, a hundred years ago, less knowledge was available to a historian, and he therefore made judgments that were not the latest account of the subject from the pen of the most recent writer that he had read. Rather, the subject matter appears truly significant only if it is properly portrayed for us. Thus we are certainly interested in the subject matter, but it acquires its life only from the light in which it is related to us. We accept the fact that the subject presents different aspects of itself at different times or from different standpoints. We accept the fact that these aspects do not simply cancel one another out as research proceeds, but are like mutually exclusive conditions that exist by themselves and combine only in us. Our historical consciousness is always filled with a variety of voices in which the echo of the past is heard. Only in the history of the present is the multiplicity of such voices does it exist: this constitutes the nature of wrong turnings are of historical interest only, because the progress of research is the self-evident standard of research. Thus it is only in the research itself and the handing down of tradition. We secondary interest to see how advances in the natural sciences to the moment in history at which they took place were, a new experience of history whenever the past resounds in a new voice. This interest does not affect the epistemic value of discoveries in the natural fields.

Why is this so? Obviously, in the human sciences we cannot speak of an object of research in the same sense as in the natural sciences, where particular research questions concerning tradition that we are interested in pursuing are motivated in a special way by the present interests. The theme and object of research are actually constituted by the historical movement of life itself and cannot be understood ideologically in terms of the object into which it is inquiring. Such an object in itself clearly does not exist at all. This is precisely what distinguishes the human sciences from the natural sciences. Whereas the object of the natural sciences can be described idealistically as what would be happened in the perfect knowledge of nature, it is senseless to speak of an "object in itself" toward which its research is directed.
(ii) The Example of the Classical

Of course it is a lot to ask that the self-understanding of the human sciences detach itself, in the whole of its activity, from the model of natural sciences and regard the historical movement of the things themselves concerned with not simply as an impairment of their objectivity, but as something of positive value. In the recent development of the human sciences, however, there are starting points for a reflection that was really do justice to the problem. The naïve schema of history-as-reality no longer dominates the way the human sciences conceive of themselves. The advancement of inquiry is no longer universally conceived of an expansion or penetration into new fields or material, but instead as raising the inquiry to a higher stage of reflection. But even where this happened, one is still thinking teleologically, from the viewpoint of progress in research, in a way appropriate to a research scientist. But a hermeneutic consciousness is gradually growing that is confusing research with a spirit of self-reflection; this is true, above all, in those human sciences that have the oldest tradition. Thus the study of classical antiquity, after it had worked over the whole extent of the available transmitted texts, continued to applied itself again, with more subtle questions, to its favorite object of study. This introduced something of an element of self-criticism by inward reflection on what constituted the real merit of its favorite object. The concept of the classical, which since Droysen's discovery of Hellenism had been reduced by historical thinking to a mere stylistic concept, acquired a new scholarly legitimacy.

It requires hermeneutic reflection of some sophistication to discover how it is possible for a normative concept such as the classical to acquire or regain its scholarly legitimacy. For it follows from the self-understanding of historical consciousness that all of the past's normative significance has been finally dissolved by sovereign historical reason. Only at the beginnings of historicism, as for example in Winckelmann's epoch-making work, had the normative element been a real motive of historical research.

The concept of classical antiquity and of the classical—which dominated pedagogical thought in particular since the days of German classicism—combined both a normative and a historical side. A particular stage in the historical development of humanity was thought to have produced a mature and perfect form of the human. This mediation between the normative and historical senses of the concept goes back to Herder. But still preserved this mediation, even though he gave it a different basis, namely in terms of the history of philosophy. For him classical art sustained its special distinction by being regarded as the "religion of art." This form of spirit is past, it is exemplary only in a qualified sense. The fact that it is a past art testifies to the "past" character of art in general. In Hegel systematically justified the historicization of the concept of classical, and he began the process of development that finally changed the classical into a descriptive stylistic concept—one that describes the evolved harmony of measure and fullness that comes between archaic simplicity and baroque dissolution. Since it became part of the aesthetic vocabulary of historical studies, the concept of the classical retains the sense of a normative content only in an unacknowledged way. Symptomatic of renewed historical self-criticism was that after the First World War classical philology started to examine itself under the banner of humanism, and hesitantly again acknowledged the combination of descriptive and historical elements in "the classical." In so doing, it proved once more (however one tried) to interpret the concept of the classical which arose in antiquity and canonized certain writers—as if it expressed the unity of a stylistic ideal. On the contrary, as a stylistic term independent concept was wholly ambiguous. Today when we use classical as a historical stylistic concept whose clear meaning is defined by its being set against what came before and after, this concept has become quite far removed from the ancient one. The concept of the classical now signifies a period of time, a phase of historical development but not a suprahistorical value.

In fact, however, the normative element in the concept of the classical has never completely disappeared. Even today it is still the basis of the idea of liberal education. The philologist is rightly dissatisfied with simply referring to his texts the historical stylistic concept that developed through the history of the plastic arts. The question whether Homer too is a classical" shatters the notion that the classical is merely a historical category of style analogous to categories of style used in the history of art—an instance of the fact that historical consciousness always includes more than it admits of itself.

If we try to see what this implies, we might say that the classical is a truly historical category, precisely because it is more than a concept of a period of a historical style, and yet it nevertheless does not try to be the concept of a suprahistorical value. It does not refer to a quality that we ascribe to particular historical phenomena but to a notable mode of being historical:
the historical process of preservation (Bewahrung) that, through constantly proving itself (Bewährung), allows something true (ein Wahres) to come into being. It is not at all the case, as the historical mode of thought would have us believe, that the value judgment which accords some status to a classic was in fact destroyed by historical reflection and criticism of all teleological construals of the process of history. Rather, through this criticism the value judgment implicit in the concept of the classical acquires a new, special legitimacy. The classical is something that resists historical criticism because its historical dominion, the binding power of the validity that is preserved and handed down, precedes historical reflection and continues in it.

To take the key example of the blanket concept of “classical antiquity,” it is, of course, unhistorical to devalue Hellenism as an age of the decline and fall of classicism, and Droysen has rightly emphasized its place in the continuity of world history and stressed the importance of Hellenism for the birth and spread of Christianity. But he would not have needed to undertake this historical theodicy if there had not always been a prejudice in favor of the classical and if the culture of “humanism” had not belonged to “classical antiquity” and preserved it within Western culture as heritage of the past. The classical is fundamentally something quite different from a descriptive concept used by an objectivizing historical consciousness. It is a historical reality to which historical consciousness belongs and is subordinate. The “classical” is something raised above the vicissitudes of changing times and changing tastes. It is immediately accessible, not through that shock of recognition, as it were, that sometimes characterizes a work of art for its contemporaries and in which the beholder experiences a fulfilled apprehension of meaning that surpasses conscious expectations. Rather, when we call something classical, there is a consciousness of something enduring, of significance that cannot be lost and that is independent of all the circumstances of time—a kind of timeless present that is contemporaneous with every other present.

So the most important thing about the concept of the classical (and the modern use of the word) is its normative sense. But insofar as this norm is related retrospectively to past greatness that fulfilled and embodied it, it always contains a temporal quality that articulates it historically. So it is not surprising that, with the rise of historical reflection in Germany which took Winckelmann’s classicism as its standard, a historical concept of a time or period detached from what was regarded as classical in Winckelmann’s sense. It denoted specific stylistic ideal and, in a historically descriptive way, also a time period that fulfilled this ideal. From the distance of the epigones who set the criterion, this stylistic ideal seemed to designate a historic moment that belonged to the past. Accordingly, the concept of the classical came to be used in modern thought to describe the whole of “classical antiquity” as a whole, and humanism again proclaimed the exemplarity of this antiquity. It was making an ancient usage, and with some justification, for those ancient authors who were “discovered” by humanism were the same ones who in antiquity comprised the canon of classics.

They were preserved in the history of Western culture precisely because they became canonical as the writers of the “school.” But it is easy to see why the historical stylistic concept was able to adopt this usage. For although there is a normative consciousness behind this concept, there is also a retrospective element. What gives birth to the classical norm is an awareness of decline and distance. It is not by accident that the concept of classical and of classical style emerges in late periods. Callimachus and Plato’s Dialogue on Oratory played a decisive role in this connection. But it is something else. The authors regarded as classical are, as we know, not the representatives of particular literary genres. They were considered the culmination of the norm of that literary genre, an ideal that literary criticism makes plain in retrospect. If we now examine these poetic norms historically—i.e., if we consider their history—then the classical is seen as a stylistic phase, a climax that articulates the history of a genre in terms of before and after. Insofar as the climactic points in the history of genres belong largely within the same brief period of time, within the totality of the historical development of classical antiquity, the classical refers to such a period and thus also becomes a concept denoting a period and fuses with a concept of style.

As such a historical stylistic concept, the concept of the classical is capable of being extended to any “development” to which an immanent unity gives unity. And in fact all cultures have high periods, when a particular civilization is marked by special achievements in all fields. Thus, it is not surprising that particular historical fulfillment, the classical as a general concept of classical period, again becomes a general historical stylistic concept.

Although this is an understandable development, the historicization of the concept also involves its uprooting, and that is why when historical consciousness started to engage in self-criticism, it reinstated the normative element in the concept of the classical as well as the historical quality of its fulfillment. Every “new humanism” shares with the first
TRUTH AND METHOD

and oldest the consciousness of belonging in an immediate way and bound to its model—which, as something past, is unattainable and present. Thus the classical epitomizes a general characteristic of historical being: preservation amid the ruins of time. The general nature of tradition is such that only the part of the past that is not past offers the possibility of historical knowledge. The classical, however, as Hegel says, is "that which is self-significant (selbst bedeutende) and hence also self-interpreting (selber Deutende)." But that ultimately means that the classical presents itself precisely because it is significant in itself and interprets itself. Literature speaks in such a way that it is not a statement about what is past—documentary evidence that still needs to be interpreted—rather, it says something to the present as if it were said specifically to it. What we call "classical" does not first require the overcoming of historical distance, for the classical, by its own constant mediation it overcomes this distance by itself. The classical, then, is certainly "timeless," but this timelessness is a mode of historical being.

Of course this is not to deny that works regarded as classical present tasks of historical understanding to a developed historical consciousness, one that is aware of historical distance. The aim of historical consciousness is not to use the classical model in the direct way, like Palladio or Corneille, but to know it as a historical phenomenon that can be understood solely in terms of its own time. But understanding it will always involve more than merely historically reconstructing the past "world" to which the work belongs. Our understanding will always retain the consciousness that it too belong to that world, and correlatively, that the work too belongs to our world.

This is just what the word "classical" means: that the duration of a work's power to speak directly is fundamentally unlimited. However much the concept of the classical expresses distance and unattainability and is part of cultural consciousness, the phrase "classical culture" still implies something of the continuing validity of the classical. Cultural consciousness manifests an ultimate community and sharing with the world from which a classical work speaks.

This discussion of the concept of the classical claims no independent significance, but serves only to evoke a general question, namely: Does the kind of historical mediation between the past and the present that characterizes the classical ultimately underlie all historical activity as effective substratum? Whereas romantic hermeneutics had taken homogenous human nature as the unhistorical substratum of its theory of understanding and hence had freed the con-genial interpreter from all historical conditions, the self-criticism of historical consciousness leads to recognizing historical movement not only in events but also in understanding itself. Understanding is to be thought of less as a subjective act and more as participating in an event of tradition, a process of transmission in which past and present are constantly mediated. This is what must be mediated by hermeneutic theory, which is far too dominated by the idea of a procedure, a method.

THE HERMENEUTIC SIGNIFICANCE OF TEMPORAL DISTANCE

We next consider how hermeneutics goes about its work. What are the consequences for understanding follow from the fact that belonging to a tradition is a condition of hermeneutics? We recall the hermeneutical rule that we must understand the whole in terms of the detail and the detail in terms of the whole. This principle stems from ancient rhetoric, and modern hermeneutics has transferred it to the art of understanding. It is a circular relationship in both cases. The anticipation of meaning in which the whole is envisaged becomes actual understanding when the parts that are determined by the whole themselves also determine this whole.

We know this from learning ancient languages. We learn that we must "reconstitute" a sentence before we attempt to understand the linguistic meaning of the individual parts of the sentence. But the process of reconstitution is itself already governed by an expectation of meaning that follows from the context of what has gone before. It is of course necessary to adjust this expectation if it is no longer possible, and the expectation changes and that the text unifies its meaning around another expectation. Thus the movement of understanding is constantly between the whole and the part, and back to the whole. Our task is to expand the centrality of the understood meaning centrifugally. The harmony of all the parts with the whole is the criterion of correct understanding. The failure to achieve this harmony means that understanding has failed.

Schiellemercher elaborated this hermeneutic circle of part and whole in which its objective and its subjective aspects. As the single word belongs to the total context of the sentence, so the single text belongs to the total context of a writer's work, and the latter in the whole of the literary genre of literature. At the same time, however, the same text, as a manifestation of a creative moment, belongs to the whole of its author's inner life. All understanding can take place only within this objective and subjective
whole. Following this theory, Dilthey speaks of “structure” and not “centering in a mid-point,” which permits one to understand the whole this (as we have already said above) he is applying to the historical what has always been a principle of all textual interpretation: namely that a text must be understood in its own terms.

The question is, however, whether this is an adequate account of a circular movement of understanding. Here we must return to what we concluded from our analysis of Schleiermacher’s hermeneutics. We cannot aside Schleiermacher’s ideas on subjective interpretation. When we try to understand a text, we do not try to transpose ourselves into the author’s mind but, if one wants to use this terminology, we try to transpose ourselves into the perspective within which he has formed his views. This simply means that we try to understand how what he is saying can be right. If we want to understand, we will try to make his arguments more stronger. This happens even in conversation, and it is a fortiori true understanding what is written down that we are moving in a dimension of meaning that is intelligible in itself and as such offers no reason for going back to the subjectivity of the author. The task of hermeneutics is to clarify this miracle of understanding, which is not a mysterious communication of souls, but sharing in a common meaning.

But even Schleiermacher’s description of the objective side of this circle does not get to the heart of the matter. We have seen that the goal of attempts to reach an understanding is agreement concerning the subject matter. Hence the task of hermeneutics has always been to establish agreement where there was none or where it had been disturbed in some way. The history of hermeneutics confirms this if, for example, we think of Augustine, who sought to mediate the Gospel with the Old Testament, or early Protestantism, which faced the same problem, or, finally, the Enlightenment, when (almost as if renouncing the possibility of agreement) it was supposed that a text could be “fully understood” only by means of historical interpretation. It is something qualitatively new when romanticism and Schleiermacher universalize historical consciousness by denying that the binding form of the tradition from which they come and in which they are situated provides a solid basis for all hermeneutical endeavor.

One of the immediate predecessors of Schleiermacher, the philosopher Friedrich Ast, still had a view of hermeneutical work that was marked concerned with content, since for him its purpose was to establish harmony between the worlds of classical antiquity and Christian

...
understanding is not a “methodological” circle, but describes an element of the ontological structure of understanding.

The circle, which is fundamental to all understanding, has a further hermeneutic implication which I call the “fore-conception of completeness.” But this, too, is obviously a formal condition of all understanding, which states that only what really constitutes a unity of meaning is intelligible. When we read a text we always assume its completeness, and only when this assumption proves mistaken—i.e., the text is not intelligible—do we begin to suspect the text and try to discover how it can be remedied. The rules of such textual criticism can be left aside, for the important thing to note is that applying them properly depends on understanding the content.

The fore-conception of completeness that guides all our understanding is, therefore, always determined by the specific content. Not only does the reader assume an immanent unity of meaning, but his understanding is likewise guided by the constant transcendent expectations of meaning. We proceed from the relation to the truth of what is being said. Just as the recipient of a letter understands the news that it contains and first things with the eyes of the person who wrote the letter—i.e., considers what he writes as true, and is not trying to understand the writer's peculiar opinions as such—so also do we understand traditionary texts on the basis of expectations of meaning drawn from our own prior relation to the subject matter. And just as we believe the news reported by a correspondent because he was present or is better informed, so too are we fundamentally open to the possibility that the writer of a transmitted text is better informed than we are, with our prior opinion. It is only when we attempt to accept what is said as true that we try to “understand” the text, psychologically or historically, as another's opinion. The precondition of completeness, then, implies not only this formal element—that a text should completely express its meaning—but also that what it says should be the complete truth.

Here again we see that understanding means, primarily, to understand the content of what is said, and only secondarily to isolate and understand another's meaning as such. Hence the most basic of all hermeneutic preconditions remains one's own fore-understanding, which comes into being concerned with the same subject. This is what determines what can be realized as unified meaning and thus determines how the fore-conception of completeness is applied.

---

Thus the meaning of “belonging”—i.e., the element of tradition in our traditional-hermeneutic activity—is fulfilled in the commonality of fundamental, enabling prejudices. Hermeneutics must start from the position of a person seeking to understand something has a bond to the subject matter that comes into language through the traditionary text and has, or shares, a connection with the tradition from which the text speaks. On the other hand, hermeneutical consciousness is aware that its bond to this subject matter does not consist in some self-evident, unquestioned unicity, as is the case with the unbroken stream of tradition. Hermeneutics is based on a polarity of familiarity and strangeness: but this polarity is to be regarded psychologically, with Schleiermacher, as the range of the mystery of individuality, but truly hermeneutically—i.e., in relation to what has been said: the language in which the text addresses us, the story that it tells us. Here too there is a tension. It is in the play between the traditionary text's strangeness and familiarity to us, between being a systematically intended, distanced object and belonging to a tradition. The true function of hermeneutics is this in-between.

In the intermediate position in which hermeneutics operates, it is not its purpose that its work is not to develop a procedure of understanding, but to study the conditions in which understanding takes place. But these conditions do not amount to a “procedure” or method which the interpreter must of himself bring to bear on the text; rather, they must be given. The prejudices and fore-meanings that occupy the interpreter's consciousness are not at his free disposal. He cannot separate in advance the productive prejudices that enable understanding from the prejudices that hinder it and lead to misunderstandings.

Rather, this separation must take place in the process of understanding itself, and hence hermeneutics must ask how that happens. But that means we must foreground what has remained entirely peripheral in previous hermeneutics: temporal distance and its significance for understanding. This point can be clarified by comparing it with the hermeneutic theory of romantism. We recall that the latter conceived of understanding as the reproduction of an original production. Hence it was possible to say that one should be able to understand an author better than he understood himself. We examined the origin of this statement and its connection with the aesthetics of genius, but must now come back to it, since our present inquiry lends it a new importance.

For that subsequent understanding is superior to the original production hence can be described as superior understanding does not depend so
much on the conscious realization that places the interpreter on the same level as the author (as Schleiermacher said) but instead denies an insuperable difference between the interpreter and the author that is created by historical distance. Every age has to understand a text in its own way, for the text belongs to the whole tradition whose content interests the age and in which it seeks to understand itself. The meaning of a text, as it speaks to the interpreter, does not depend on the contingencies of the author and his original audience. It certainly is not identical with them, for it is always co-determined also by the historical situation of the interpreter and hence by the totality of the objective content of history. A writer like Chaldéus, who does not yet view understanding in terms of history, is saying the same thing in a naive, ingrained way when he says that an author does not need to know the real meaning of what he has written: and hence the interpreter can, and must, understand more than he. But this is of fundamental importance. Not occasionally but always, the meaning of a text goes beyond its author. This is why understanding is not merely a reproductive but always a productive activity as well. Perhaps it is not correct to refer to this productive element in understanding as “better understanding.” For this phrase is, as we have shown, a principle of criticism taken from the Enlightenment and reared on the basis of the aesthetics of genius. Understanding is not, in this understanding better, either in the sense of superior knowledge of the subject because of clearer ideas or in the sense of fundamental superiority of conscious over unconscious production. It is enough to say that we understand in a different way, if we understand at all.

Such a conception of understanding breaks right through the conceptions drawn by romantic hermeneutics. Since we are now concerned not with individuality and what it thinks but with the truth of what is said, a text is not understood as a mere expression of life but is taken seriously in its claim to truth. That this is what is meant by “understanding” was once evident (we need only recall Chaldéus). But this dimension of the hermeneutical problem was discredited by historical consciousness and the psychological turn that Schleiermacher gave to hermeneutics, and can only be regained when the aporias of historicism came to light and finally to the fundamentally new development to which Heidegger, in his view, gave the decisive impetus. For the hermeneutic productive and temporal distance could be understood only when Heidegger gave understanding an ontological orientation by interpreting it as an “existent” and when he interpreted Dasein’s mode of being in terms of time.

Time is no longer primarily a gulf to be bridged because it separates; it is only the supportive ground of the course of events in which the present is imbedded. Hence temporal distance is not something that must be overcome, but rather, the naive assumption of historicism, namely that one must transpose ourselves into the spirit of the age, think with its ideas, feel the thoughts, not with our own, and thus advance toward historical reality. In fact the important thing is to recognize temporal distance as a productive condition enabling understanding. It is not a uniform abyss but is filled with the continuity of custom and tradition, in light of which everything handed down presents itself to us. Here it is not too much to speak of the genuine productivity of the course of events. Everyone is familiar with the curious impotence of our judgment when it comes to temporal distance not given us sure criteria. Thus the judgment of contemporary works of art is desperately uncertain for the scholarly and the layman. Obviously we approach such creations with unverifiable presuppositions, presuppositions that have too great an influence over us for us to know about them: these can give contemporary creations an extra value that does not correspond to their true content and significance. When all their relations to the present time have faded away can their true nature appear, so that the understanding of what is said can be seen to be authoritative and universal.

In historical studies this experience has led to the idea that objective knowledge can be achieved only if there has been a certain historical distance. It is true that what a thing has to say, its intrinsic content, first appears only after it is divorced from the fleeting circumstances that gave it birth to it. The positive conditions of historical understanding include the closure of a historical event, which allows us to view it as a whole, and the distance from contemporary opinions concerning its import. The presupposition of historical method, then, is that the permanent value of something can first be known objectively only when it is removed to a closed context—in other words, when it is dead enough to be capable of being purely historical interest. Only then does it seem possible to exclude the subjective involvement of the observer. This is, in fact, a paradox, the philosophical counterpart to the old moral problem of whether anyone can be happy before his death. Just as Aristotle showed how this view, gave the decisive impetus. For the hermeneutic productive and temporal distance could be understood only when Heidegger gave understanding an ontological orientation by interpreting it as an “existent” and when he interpreted Dasein’s mode of being in terms of time.
has come to be of only historical interest. Certain sources of error are automatically excluded. But it is questionable whether this is the last word of the hermeneutical problem. Temporal distance obviously means something other than the extinction of our interest in the object. It lets the meaning of the object emerge fully, but the discovery of the true meaning of a text or a work of art is never finished; it is an infinite process of assembling and understanding are continually emerging that reveal unsuspected elements of meaning. The temporal distance that performs the filtering process is fixed, but it is itself undergoing constant movement and extension along with the negative side of the filtering process brought about by the temporal distance there is also the positive side, namely the value it lends to the understanding. It not only lets local and limited prejudices die away but allows those that bring about genuine understanding to emerge clearly and sharply.

Often temporal distance can solve question of critique in hermeneutics, namely how to distinguish the true prejudices, by which we misunderstand, from the false ones, by which we misunderstand. Hence, a hermeneutically trained mind will also include historical consciousness. It will make conscious the prejudices governing our own understanding, that the text, as another's meaning, can be isolated and valued on its own. Foregrounding (abheben) a prejudice clearly requires suspending validity for us. For as long as our mind is influenced by a prejudice, we do not consider it a judgment. How then can we foreground it? It is impossible to make ourselves aware of a prejudice while it is constantly operating unnoticed, but only when it is, so to speak, provoked. The encounter with a traditionary text can provide this provocation. For what leads the understanding must be something that has already asserted itself in its own separate validity. Understanding begins, as we have already said above, when something addresses us. This is the first condition of hermeneutics. We now know what this requires, namely the fundamental suspension of prejudices. We have the logical structure of a question.

The essence of the question is to open up possibilities and keep them open. If a prejudice becomes questionable in view of what another person says or a text says to us, this does not mean that it is simply set aside and text or the other person accepted as valid in its place. Rather, historical objectivism shows its naivete in accepting this disregarding of oneself and actually happens. In fact our own prejudice is properly brought into play by being put at risk. Only by being given full play is it able to experience the other's claim to truth and make it possible for him to have a say in the matter. The knowledge of so-called historicism consists in the fact that it does not take this reflection, and in trusting to the fact that its procedure is neutral, it forgets its own historicity. We must here appeal from a badly thought-out historical thinking to one that can better perform the task of understanding. Real historical thinking must take account of its own historicity. Only then will it cease chase the phantom of a historical thinking that is the object of progressive research, and learn to view the object as the counterpart of itself and hence understand both. The true historical object is not an object at all, but the unity of the one and the other, a relationship that constitutes both the reality of history and the reality of historical understanding. A hermeneutics adequate to the fact matter would have to demonstrate the reality and efficacy of history within understanding itself. I shall refer to this as “history of effect.”

Principle of History of Effect (Wirkungsgeschichte)

Historical interest is directed not only toward the historical phenomenon and the traditionary work but also, secondarily, toward their effect in the history (which also includes the history of research); the history of effect is regarded as a mere supplement to historical inquiry, from which, e.g., we can obtain many valuable insights. To this extent, history of effect is not new. To require an inquiry into history of effect every time a work of art or a text of the tradition is led out of the twilight region between tradition and the present—this is a new demand (addressed not to research, but to its methodological consciousness) that proceeds inevitably from thinking hermeneutics through.

It is not, of course, a hermeneutical requirement in the sense of the traditional conception of hermeneutics. I am not saying that historical consciousness should develop inquiry into the history of effect as a kind of methodological consciousness but that it must become conscious of itself and its own immediacy with which it approaches a work of art or
a traditionally text, there is also another kind of inquiry in play, also unrecognized and unregulated. If we are trying to understand a historical phenomenon from the historical distance that is characteristic of the hermeneutical situation, we are always already affected by history in advance both what seems to us worth inquiring about what will appear as an object of investigation, and how we decide what half of what is really there. In fact, we miss the whole truth of the phenomenon—when we take its immediate appearance as the whole truth.

In our understanding, which we imagine is so innocent because results seem so self-evident, the other presents itself so much in terms of our own selves that there is no longer a question of self and other, of seeing through, or of relying on its critical method, historical objectivism conceals the fact that historical consciousness is itself situated in the web of historical effects. Means of methodical critique it does away with the arbitrariness of “relevant” appropriations of the past, but it preserves its good conscience by failing to recognize the presuppositions—certainly not arbitrary, but fundamentally—that govern its own understanding, and hence falls short of reaching that truth which, despite the finite nature of our understanding, could be reached. In this respect, historical objectivism resembles strategy, which are such excellent means of propaganda because they let the “facts” speak and hence simulate an objectivity that in reality depends on the legitimacy of the questions asked.

We are not saying, then, that history of effect must be developed as a new independent discipline ancillary to the human sciences, but that we should learn to understand ourselves better and recognize that in understanding, whether we are expressly aware of it or not, the efficacy of history is at work. When a naïve faith in scientific method denies the existence of effective history, there can be an actual deformation of knowledge. We are familiar with this from the history of science, when science appears as the irrefutable proof of something that is obviously false. But the whole the power of effective history does not depend on its being recognized. This, precisely, is the power of history over finite human consciousness, namely that it prevails even where faith in method is not recognized, and one to deny one’s own historicity. Our need to become conscious of effective history is urgent because it is necessary for scientific consciousness. But this does not mean it can ever be absolutely fulfilled. That should become completely aware of effective history is just as hybrid a statement as when Hegel speaks of absolute knowledge, in which history.

Consciousness of being affected by history (wirkungsgeschichtliches Bewusstsein) is primarily consciousness of the hermeneutical situation. To achieve an awareness of a situation is, however, always a task of peculiar complexity. The very idea of a situation means that we are not standing inside it and hence are unable to have any objective knowledge of it. We always find ourselves within a situation, and, throwing light on it is a task that is never entirely finished. This is also true of the hermeneutical situation—i.e., the situation in which we find ourselves with regard to the situation that we are trying to understand. The illumination of this situation—reflection on effective history—can never be completely finished, yet the fact that it cannot be completed is due not to a deficiency in reflection but to the essence of the historical being that we are. To be historically means that knowledge of oneself can never be complete. All self-knowledge arises from what is historically pregiven, what with Hegel we call substance, because it underlies all subjective intentions and actions, hence both prescribes and limits every possibility for understanding the tradition whatsoever in its historical alterity. This almost defines the essence of philosophical hermeneutics: its task is to retrace the path of Hegel’s phenomenology of mind until we discover in all that is subjective the essentiality that determines it.

Every finite present has its limitations. We define the concept of situation” by saying that it represents a standpoint that limits the possibility of vision. Hence essential to the concept of situation is the concept of “horizon.” The horizon is the range of vision that includes everything that can be seen from a particular vantage point. Applying this to the thinking mind, we speak of narrowness of horizon, of the possible expansion of horizon, of the opening up of new horizons, and so forth. Nietzsche and Husserl, the word has been used in philosophy to characterize the way in which thought is tied to its finite determinacy, and one by one’s own horizon. A person who has no horizon does not see far enough and hence over-values what is nearest to him. On the other hand, “to have a horizon” means not being limited to what is nearby but being able to see beyond it. A person who has an horizon knows the relative significance of everything within this horizon.
TRUTH AND METHOD

whether it is near or far, great or small. Similarly, working out the hermeneutical situation means acquiring the right horizon of inquiry, of the questions evoked by the encounter with tradition.

In the sphere of historical understanding, too, we speak of horizons especially when referring to the claim of historical consciousness to see the past in its own terms, not in terms of our contemporary criteria or prejudices but within its own historical horizon. The task of historical understanding also involves acquiring an appropriate historical horizon of what we are trying to understand can be seen in its true dimension. If we fail to transpose ourselves into the historical horizon from which the traditional text speaks, we will misunderstand the significance of what it has to say to us. To that extent this seems a legitimate hermeneutical requirement: we must place ourselves in the other situation in order to understand it. We may wonder, however, whether this phrase is adequate to describe the understanding that is required of us. The same is true of a conversation that we have with someone simply in order to get to know him, i.e., to discover where he is coming from and his horizon. This is a true conversation—that is, we are not seeking agreement on some subject—because the specific contents of the conversation are only means to get to know the horizon of the other person. Examples are internal examinations and certain kinds of conversation between doctors and patients. Historical consciousness is clearly doing something similar when it transposes itself into the situation of the past and thereby claims to have acquired the right historical horizon. In a conversation, when we have discovered the other person's standpoint and horizon, his ideas become intelligible without our necessarily having to agree with him; so also when someone thinks historically, he comes to understand the meaning of what has been handed down without necessarily agreeing with it or seeing himself in it.

In both cases, the person understanding has, as it were, stopped trying to reach an agreement. He himself cannot be reached. By factoring the other person's standpoint into what he is claiming to say, we are making our standpoint safely unattainable. In considering the origin of historical thinking, we have seen that in fact it makes this ambiguous transition from means to ends—i.e., it makes an end of what is only a means. The text is understood historically is forced to abandon its claim to be something true. We think we understand when we see the past from our historical standpoint—i.e., transpose ourselves into the historical situation and try to reconstruct the historical horizon. In fact, however, we must always already have a horizon set up the claim to find in the past any truth that is valid and intelligible for us. Acknowledging the otherness of the other in this way, giving him the object of objective knowledge, involves the fundamental condition of his claim to truth.

However, the question is whether this description really fits the hermeneutical phenomenon. Are there really two different horizons here—the horizon in which the person seeking to understand lives and the historical horizon within which he places himself? Is it a correct description of the act of historical understanding to say that we learn to transpose ourselves into different horizons? Are there such things as closed horizons, in this sense? We think Nietzsche's complaint against historicism that it destroyed the man bounded by myth in which alone a culture is able to live. Is the man of one's own present time ever closed in this way, and can a historical situation be imagined that has this kind of closed horizon? Is this a romantic refraction, a kind of Robinson Crusoe dream of historical enlightenment, the fiction of an unattainable island, as artificial as Crusoe himself—i.e., as the alleged primacy of the solus ipse? Just as the individual is never simply an individual because he is always in understanding with others, so too the closed horizon that is supposed to enclose a culture is an abstraction. The historical movement of human life consists in the fact that it is never absolutely bound to any one standpoint, and hence can never have a truly closed horizon. The horizon is, rather, something into which we move and that moves with us. Horizons change as the person who is moving. Thus the horizon of the past, out of which all human life lives and which exists in the form of tradition, is always in motion. The surrounding horizon is not set in motion by historical consciousness. But in it this motion becomes aware of itself.

When our historical consciousness transposes itself into historical horizon, this does not entail passing into alien worlds unconnected in any way to our own; instead, they together constitute the one great horizon that goes from within and that, beyond the frontiers of the present, embraces the historical depths of our self-consciousness. Everything contained in our past and that other past toward which our historical consciousness has directed help to shape this moving horizon out of which human life comes together and which determines it as heritage and tradition.

Understanding tradition undoubtedly requires a historical horizon. But it is not the case that we acquire this horizon by transposing ourselves into the historical situation. Rather, we must always already have a horizon
in order to be able to transpose ourselves into a situation. For what does
mean by “transposing ourselves”? Certainly not just disregarding
selves. This is necessary, of course, insofar as we must imagine the
situation. But into this other situation we must bring, precisely, ourself.
Only this is the full meaning of “transposing ourselves.” If we put ourself
in someone else’s shoes, for example, then we will understand him as
become aware of the otherness, the indissoluble individuality of the other
person—by putting ourselves in his position.

Transposing ourselves consists neither in the empathy of one indivi
d for another nor in subordinating another person to our own standard.
rather, it always involves rising to a higher universality that overcomes
only our own particularity but also that of the other. The concept of
“horizon” suggests itself because it expresses the superior breadth of
that the person who is trying to understand must have. To acquire
horizon means that one learns to look beyond what is close at hand
in order to look away from it but to see it better, within a larger whole
in truer proportion. To speak, with Nietzsche, of the many changing
horizons into which historical consciousness teaches us to place ourself
is not a correct description. If we disregard ourselves in this way, we
no historical horizon. Nietzsche’s view that historical study is detele
life is not, in fact, directed against historical consciousness as such.
against the self-alienation it undergoes when it regards the method
modern historical science as its own true nature. We have already pointed
out that a truly historical consciousness always sees its own present in
a way that it sees itself, as well as the historically other, within the
relationships. It requires a special effort to acquire a historical horizon
are always affected, in hope and fear, by what is nearest to us, and how
we approach the testimony of the past under its influence. Thus it
constantly necessary to guard against hastily assimilating the past
our own expectations of meaning. Only then can we listen to tradition
a way that permits it to make its own meaning heard.

We have shown above that this is a process of foregrounding (able to
Let us consider what this idea of foregrounding involves. It is a
reciprocal. Whatever is being foregrounded must be foregrounded by
something else, which, in turn, must be foregrounded from it. Thus,
foregrounding also makes visible that from which something is for
grounded. We have described this above as the way prejudices are bro
into play. We started by saying that a hermeneutical situation is do
mined by the prejudices that we bring with us. They constitute, then,

Elements of a particular present, for they represent that beyond which it is
possible to see. But now it is important to avoid the error of thinking
the horizon of the present consists of a fixed set of opinions and
ions, and that the otherness of the past can be foregrounded from it
on a fixed ground.

The fact the horizon of the present is continually in the process of being
formed because we are continually having to test all our prejudices. A
part of this testing occurs in encountering the past and in
understanding the tradition from which we come. Hence the horizon of
present cannot be formed without the past. There is no more an
horizon of the present in itself than there are historical horizons
have to be acquired. Rather, understanding is always the fusion of these
two, as supposed to exist by themselves. We are familiar with the power of
the kind of fusion chiefly from earlier times and their naiveté about
theses and their heritage. In a tradition this process of fusion is
continuously going on, for there old and new are always combining into
something of living value, without either being explicitly foregrounded
the other.

However, there is no such thing as these distinct horizons, why do we
see the fusion of horizons and not simply the formation of the one
hison, whose bounds are set in the depths of tradition? To ask the
question means that we are recognizing that understanding becomes a
modern hermeneutical science as its own true nature. We have already pointed
out that a truly historical consciousness always sees its own present in

TRUTH AND METHOD

understanding. In the process of understanding, a real fusing of horizons occurs—which means that the historical horizon is projected simultaneously superseded. To bring about this fusion in a regulated way is the task of what we called historically affected consciousness. Although this task was obscured by aesthetic-historical positivism and the heels of romantic hermeneutics, it is, in fact, the central problem of hermeneutics. It is the problem of application, which is to be found in understanding.

2 THE RECOVERY OF THE FUNDAMENTAL HERMENEUTIC PROBLEM

(a) THE HERMENEUTIC PROBLEM OF APPLICATION

In the early tradition of hermeneutics, which was completely invisible in the historical self-consciousness of post-romantic scientific epistemology, this problem had its systematic place. Hermeneutics was subdivided into three elements: understanding (interpretation) and subtilitas explicandi (application); and pietism added a third element, subtilitas explicandi (application), as in J. J. Rambach's. The process of understanding was regarded as consisting of these three elements. It is notable that all three are called subtilitas—i.e., they are considered as methods that we have at our disposal than as the requiring particular finesse of mind. As we have seen, the hermeneutic problem acquired systematic importance because the romantics recognized the inner unity of intelligere and explicare. Interpretation is not a focus or post facto supplement to understanding; rather, understanding is always interpretation, and hence interpretation is the explicit form of understanding. In accordance with this insight, interpretive language concepts were recognized as belonging to the inner structure of understanding. This moves the whole problem of language from its peripheral and incidental position into the center of philosophy. We will return to this point.

The inner fusion of understanding and interpretation led to the central element in the hermeneutical problem, application, becoming what is excluded from any connection with hermeneutics. The edifying application of Scripture in Christian preaching, for example, now seemed different from the historical and theological understanding of it. In course of our reflections we have come to see that understanding and application is something like applying the text to be understood to the interpreter's present situation. Thus we are forced to go one step beyond typical hermeneutics, as it were, by regarding not only understanding, but also application as comprising one unified process. We must not return to the pietist tradition of the three separate "subtilit"s, but consider application to be just as integral a part of the hermeneutical process as are understanding and interpretation. The current state of the hermeneutical discussion is what occasions my pointing to the fundamental importance of this point. We can appeal first to one of the forgotten history of hermeneutics. Formerly it was considered evident that the task of hermeneutics was to adapt the text's meaning to a concrete situation to which the text is speaking. The interpreter of the text is he who can interpret the oracle's language is the original model for this. But even today it is still the case that an interpreter's task is not simply to express what one of the partners says in the discussion he is translating, but to express what is said in the way that seems most appropriate to him, without affecting the real situation of the dialogue, which only he knows, since he knows both languages being used in the discussion.

Similarly, the history of hermeneutics teaches us that besides literary hermeneutics, there is also a theological and a legal hermeneutics, and that they make up the full concept of hermeneutics. As a result of the emergence of historical consciousness in the eighteenth and nineteenth centuries, philological hermeneutics and historical studies cut their ties with the other hermeneutical disciplines and established themselves as the core of methodology for research in the human sciences.

The fact that philological, legal, and theological hermeneutics originally emerged closely together depended on recognizing application as an integral element of all understanding. In both legal and theological hermeneutics there is an essential tension between the fixed text—the law or the gospel—on the one hand and, on the other, the sense arrived at by applying it at the concrete moment of interpretation, either in judgment or in teaching. A law does not exist in order to be understood historically, yet it must be concretized in its legal validity by being interpreted. Similarly, the gospel does not exist in order to be understood as a merely historical document, but to be taken in such a way that it exercises its saving effect. This implies that the text, whether law or gospel, if it is to be understood properly—i.e., according to the claim it makes—must be understood as
every moment, in every concrete situation, in a new and different way. Understanding here is always application.

We began by showing that understanding, as it occurs in the human sciences, is essentially historical—i.e., that in them a text is understood only if it is understood in a different way as the occasion requires. But this indicates the task of a historical hermeneutics: to consider the text that exists between the identity of the common object and the changing situation in which it must be understood. We began by saying that the historical movement of understanding, which romantic hermeneutics has pushed to the periphery, is the true center of hermeneutical phenomena. Our consideration of the significance of tradition in historical consciousness started from Heidegger’s analysis of the hermeneutics of facticity and sought to apply his analysis to the hermeneutics of the human sciences. We showed that understanding is a method which the inquiring consciousness applies to an object it does not know and so turns it into objective knowledge: rather, it is the understanding of the event of tradition, a process of handing down, that is a prior condition of understanding. Understanding proves to be an event, and the task of hermeneutics, seen philosophically, consists in asking what kind of understanding, what kind of science it is, that is itself advanced by history and change.

We are quite aware that we are asking something unusual of the concept of understanding of modern science. All of our considerations thus far have been directed toward making this task easier by showing that it is possible to understand the convergence of a large number of problems. In fact, hermeneutical theory hitherto has lacked a method of interpretation. When a distinction is made between cognitive, normative, and reproductive interpretation, as in Betti’s General Theory of Interpretation, which is based on a remarkable knowledge and survey of the subject, difficulties arise in categorizing phenomena according to the functional division. This is especially true of scholarly interpretation. If we combine theological interpretation together with legal interpretation and add them a normative function, then we must remember Schleiermacher, on the contrary, closely connected theological interpretation with general interpretation, which was for him the philological-historical one. In the split between the cognitive and the normative function runs the difference between theological hermeneutics and can hardly be overcome by distinguishing scientific knowledge from the subsequent edifying applications.

The same runs through legal interpretation also, in that discovering the meaning of a legal text and discovering how to apply it in a particular legal situation are not two separate actions, but one unitary process.

But understanding is a different kind of interpretation that seems furthest from the kinds we have been considering, namely performative interpretation, as in the interpretation of music and drama—and they acquire their real existence only in the process of embodiment.** Is it a conversation? Is it a split between the cognitive and the normative function. No. It is not, because the act of understanding the original meaning of the text and presenting it in his interpretation. But, similarly, no one will be able to make performative interpretation without taking account of that other normative phenomenon—the stylistic values of one’s own day—which, whenever a text is brought to sensory appearance, sets limits to the demand for a historically correct reproduction. When we consider that translating texts of a foreign language, imitating them, or even reading texts aloud involves the same explanatory achievement as philological interpretation, so that the two things become as one, then we cannot avoid the conclusion that the suggested distinction between cognitive, normative, and reproductive interpretation has no fundamental validity, but all constitute one unitary phenomenon.

If this is the case, then we have the task of redefining the hermeneutics of the human sciences in terms of legal and theological hermeneutics. For this we must remember the insight gained from our investigation into romantic hermeneutics, namely that both its structure and its culmination in psychological interpretation—i.e., deciphering and explaining the individuality of the interpreter—treat the problem of understanding in a way that is far too one-sided. Our line of thought prevents us from dividing the hermeneutic system in terms of the subjectivity of the interpreter and the objectivity of the text itself, and the meaning to be understood. This would be starting from a false consciousness that cannot be resolved even by recognizing the dialectic of subjective and objective. To distinguish between a normative function and a cognitive one is to separate what clearly belong together. The meaning of a text that emerges in its normative application is fundamentally no different from the meaning reached in understanding a text. It is quite possible to base the possibility of understanding a text on the postulate of “progenitality” that supposedly unites the creator and the interpreter of a text. If this were really the case, then the human sciences would be in a new way. But the miracle of understanding consists in the fact that no
like-mindedness is necessary to recognize what is really significant and fundamentally meaningful in tradition. We have the ability to subdue ourselves to the superior claim the text makes and to respond to what it has to tell us. Hermeneutics in the sphere of philology and the humanities is not "knowledge as domination"—i.e., appropriating and taking possession; rather, it consists in subordinating ourselves to the superior claim to dominate our minds. Of this, however, legal and therapeutic hermeneutics are the true model. To interpret the law's will and the promises of God is clearly not a form of domination but of service. Through our interpretations—which includes application—in the service of what is considered valid. Our thesis is that historical hermeneutics too has a task to perform, because it too serves applicable meaning, in the sense of explicitly and consciously bridging the temporal distance that separates the interpreter from the text and overcomes the alienation of meaning the text has undergone.  

(2) THE HERMENEUTIC RELEVANCE OF ARISTOTLE

At this point a problem arises that we have touched on several times. The heart of the hermeneutical problem is that one and the same text must time and again be understood in a different way, the problem logically speaking, concerns the relationship between the universal and the particular. Understanding, then, is a special case of applying some universal to a particular situation. This makes Aristotelian ethics extremely important for us—we touched on it in the introductory remarks on the theory of the human sciences. It is true that Aristotle is not concerned with the hermeneutical problem and certainly not with its historical dimension, but with the right estimation of the role that reason has in moral action. But what interests us here is precisely that he is concerned with reason and with knowledge, not detached from a being in becoming, but determined by it and determinative of it. By circumventing the intellectualism of Socrates and Plato in his inquiry into the good, Aristotle became the founder of ethics as a discipline independent of metaphysics. Criticizing the Platonic idea of the good as an inner generality, he asks instead the question of what is humanly good, what is good in terms of human action. His critique demonstrates the equation of virtue and knowledge, arete and logos, which is the basis Plato's and Socrates' theory of virtue, is an exaggeration. Aristotle restores the balance by showing that the basis of moral knowledge in man is not "ethics"—indicates Aristotle bases arete on practice and ethics, human civilization differs essentially from nature in that it is not simply where capacities and powers work themselves out; man becomes what he does through what he does and how he behaves—i.e., he behaves in a certain way because of what he has become. Thus Aristotle sees ethos as arising from physis in being a sphere in which the laws of nature do not yet a sphere of lawlessness but of human institutions and modes of behavior which are mutable, and like rules only to a certain degree.

The question is whether there can be any such thing as philosophical knowledge of the moral being of man and what role knowledge (i.e., moral knowledge is to determine what the concrete situation calls for. This state of affairs, which represents the nature of moral action, not only makes philosophical ethics a methodologically difficult problem, but also gives the problem of method a moral relevance. In contrast to the theory of the good based on Plato's doctrine of ideas, Aristotle recognizes that it is impossible for ethics to achieve the extreme exactitude of mathematics. Indeed, to demand this kind of exactitude would be inappropriate. What needs to be done is simply to make an outline and by means of this sketch give some help to moral consciousness. But how in moral action. But what interests us here is precisely that he is concerned with reason and with knowledge, not detached from a being in becoming, but determined by it and determinative of it. TRUTH AND METHOD

it, and because he applies it to the situation and knows what order would mean in that situation, he refuses. The criterion of understanding is clearly not in the order's actual words, nor in the mind of the person who obeyed the order, but solely in the understanding of the situation and the responsible behavior of the person who obeys. Even when an order is written down so one can be sure it will be correctly understood, no one assumes that it makes everything explicit. The situation in which orders are carried out literally but not according to their meaning is well known. Thus there is no doubt that the recipient of an order must perform a definite creative act in understanding its meaning.

If we now imagine a historian who regards a traditional text as such an order and seeks to understand it, he is, of course, in a situation different from that of the original addressee. He is not the person to whom the order is addressed and so cannot relate it to himself. But if he wants to understand the order, then he must, idealiter, perform the same act as that performed by the intended recipient of the order. The latter, who applies the order to himself, is well able to distinguish between understanding and obeying an order. It is possible for him not to obey an order when—indeed, precisely when—he has understood it. It may be difficult for the historian to reconstruct the original situation in which the order arose. But he will understand it fully only when he has thus made the order concrete. This, then, is the clear hermeneutical demand: to understand a text in terms of the specific situation in which it was written and to prevent it from being a mere abstraction.

According to the self-understanding of science, then, it can make no difference to the historian whether a text was addressed to a particular person or was intended “to belong to all ages.” The general requirement of hermeneutics is, rather, that every text must be understood according to the aim appropriate to it. But this means that historical scholarship seeks to understand every text in its own terms and does not accept the content of what it says as true, but leaves it undecided. Understanding is certainly concretization, but one that involves keeping a hermeneutical distance. Understanding is possible only if one keeps oneself out of the text. This is the demand of science.

According to this self-interpretation of the methodology of the humanities, it is generally said that the interpreter imagines an address to every text, whether expressly addressed by the text or not. This address is in every case the original reader, and the interpreter knows that he is a different person from himself. This is obvious, when thus not expressed. A person trying to understand a text, whether literary critic, historian, does not, at any rate, apply what it says to himself. He is simply to understand what the author is saying, and if he is simply trying to understand, he is not interested in the objective truth of what is said as such, but not even if the text itself claims to teach truth. On this the philologist and the historian are in agreement.

Hermeneutics and historical study, however, are clearly not the same. By examining the methodological differences between the two, we can discover that what they really have in common is not what they are usually thought to have. The historian has a different orientation to the past, in that he is trying to discover something about the past which is not part of the past. He therefore uses other traditional material to supplement and verify what the texts say. He considers it as more or less of a weakness if the philologist regards his text as a work of art. A work of art is a self-sufficient world. But the interest of the historian knows no self-sufficiency. Against Schleiermacher, Dilthey once said, “Philology is merely like to see self-contained existence everywhere.” If a work of art from the past makes an impression on a historian, this will have hermeneutical significance for him. It is fundamentally impossible for the historian to regard himself as the addressee of the text and accept its claim on him. Rather, he examines the text to find something it is not, of itself, trying to provide. This is true even of traditionary material which purports to be historical representation. Even the writer of history is subject to historical critique.

Finally the historian goes beyond hermeneutics, and the idea of interpretation acquires a new and more defined meaning. It no longer refers to the explicit act of understanding a given text, as for the philologist. The concept of historical interpretation corresponds more to the idea of expression, which is not understood by historical hermeneutics in its literal and traditional sense—that is, as a rhetorical term that refers to the presentation of language to thought. What the expression expresses is not solely what is supposed to be expressed in it—what is meant by it—primarily what is also expressed by the words without its being needed—that is, what the expression, as it were, “betrays.” In this wider sense the word “expression” refers to far more than linguistic expression; it includes everything that we have to get behind, and that at the same time enables us to get behind it. Interpretation here, then, does not refer to the sense intended, but to the sense that is hidden and has to be expressed. In this sense every text not only presents an intelligible meaning in many respects, needs to be interpreted. The text is primarily a
TRUTH AND METHOD

phenomenon of expression. It is understandable that the historian
is interested in this aspect. For the documentary value of, say, a
depends in part on what the text, as a phenomenon of expression,
does. From this, one can discover what the writer intended without saying
how he expected it to be interpreted, that is, the text was understood
to be interpreted in terms of the reader's own experience. It is
understandable that the subject of the work of art, in the
degree of lack of principle or dishonesty is to be expected of him. It
ds not matter whether the writer intended a text, a text, or
subjective elements affecting the credibility of the witness must be
into consideration. But, above all, the content of the traditionary
must be interpreted, even if its subjective reliability is estab-
lished—i.e., the text is understood as a document whose true meaning is
discovered only behind its literal meaning, by comparing it with other
texts that allow us to estimate its historical value.

Thus for the historian it is a basic principle that tradition is to be interpreted
in a sense different than the texts of themselves, call it for. He will always go
behind them and the meaning they express to inquire into the reality
expression involuntarily. Texts must be treated in the same way as
available historical material—i.e., as the so-called relics of the past. Everything else, they need explanation—i.e., to be understood in terms
not only what they say but what they exemplify.

The concept of interpretation reaches its culmination here. Inter-
pretation is necessary where the meaning of a text cannot be immedi-
ately understood. It is necessary wherever one is not prepared to trust that
phenomenon immediately presents to us. The psychologist interprets
this way by not accepting the expressions of life in his intended sense
and delving back into what was taking place in the unconscious. Similarly
the historian interprets the data of tradition in order to discover
the meaning that is expressed and, at the same time, hidden in them.

Thus there is a natural tension between the historian and the philo-
osophy of the criticism. The historian's interpretation is concerned with something that is
expressed in the text itself and need have nothing to do with the intended
meaning of the text. There is a fundamental conflict here between
historical and literary consciousness, although this tension still
exists now that historical consciousness has also altered the orientation
critic. He has given up the claim that the texts have a normative value
for him. He no longer regards the text as a model of the best that has
been thought and said, but looks at them in a way that they themselves
intend to be looked at; he looks at them as a historian. This has
philology and criticism subsidiary disciplines of historical studies.

ELEMENTS OF A THEORY OF HERMENEUTIC EXPERIENCE

as glimpsed already in classical philology when it began to call itself
science of antiquity (Wilamowitz). It is a department of historical
sciences concerned primarily with language and literature. The philologist
is a historian, in that he discovers a historical dimension in his literary
work. Understanding, then, is for him a matter of placing a given text in
context of the history of language, literary form, style, and so on, and
ultimately mediating it with the whole context of historical life. Only
precisely does his own original nature come through. Thus, in judging
recent historians, he tends to give these great writers more credence
the historian finds justified. This ideological credulity, which makes
philologist overestimate the value of his texts as evidence, is the last
chance of his own claim to be the friend of "eloquence" and the mediator of
the history of literature.

It is now inquire whether this description of the procedure of the
philology, in which the historian and the critic of today are one, is
true and whether the claim of historical consciousness to be universal
is justified. In regard to philology it seems questionable. The critic is
likely mistaking his own nature, as a friend of eloquence, if he bows
to the standard of historical studies. If his texts possess an exemplary
character for him, this may be primarily in regard to form. The older
philologists fervently believed that everything in classical literature was
an exemplar from which they could learn. If they say, for instance, that
eloquence (schöne Rede) is not called such because what is said is said
beautifully, but also because something is said. It seeks to be more than mere rhetoric. It is particularly
the national poetic traditions that we admire not only their poetic
but the image and art of their expression, and above all the great
poet that speaks in them.

In the work of the critic, then, there is still something of only
knowing models, he is not in fact relating his texts merely to a
constructed addressee but also to himself (though he is unwilling to
think this). But in accepting models there is always an understanding that
not leave their exemplarity undecided, but rather has already chosen
to consider itself obligated to them. That is why relating oneself to an
author is always like following in someone's footsteps. And just as this
is more than mere imitation, so this understanding is a continually new
encounter and has itself the character of an event precisely because
not simply leave things up in the air but involves application. The
literary critic, as it were, weaves a little further on the great tapestry of the tradition that supports us.

If we acknowledge this, then criticism and philology can attain the dignity and proper knowledge of themselves only by being liberate-ly history. Yet this seems to me to be only half the truth. Rather, we must ask whether the picture of the historical approach, as set out here, is not itself distorted. Perhaps not only the approach of the critic and philologist, but also that of the historian should be oriented not so much to the methodological ideal of the natural sciences as to the model offered by the legal and theological hermeneutics. It may be that the historical approach to texts differs specifically from the original bond of the critic to history. It may be that the historian tries to get behind the texts in order to them to yield information that they do not intend, and are unwilling to give. With regard to the individual text, this would seem to be the case. The historian approaches his texts the way an investigator, a magistrate approaches his witnesses. But simply establishing facts, drawing from possibly prejudiced witnesses, does not make the historian. What makes the historian is understanding the significance of what he has found. Thus the testimony of history is like that given before a court. It is an accident that in German the same word is used for both, Zeuge (testimony; witness). In both cases testimony aids in establishing the past. But the facts are not the real objects of inquiry; they are simply material for the real tasks of the judge and of the historian—that is, respectively, to reach a just decision and to establish the historical significance of an event within the totality of his historical self-consciousness.

Thus the whole difference is possibly only a question of the criteria one should choose too nicely if one would reach the essentials. We have already shown that traditional hermeneutics artificially limited the dimensions of the phenomenon, and perhaps the same is true of the historical approach. Is it not the case here too that the really important things precede any application of historical methods? A historical hermeneutics that does not make the nature of the historical question the central thing does not inquire into a historian's motives in examining historical material. It lacks its most important element.

If we accept this, then the relation between literary criticism and historical studies suddenly appears quite different. Although we spoke of the humanities as being under the alien control of historical studies, it is not the last word on the matter. Rather, it seems to me that the problem of application, of which we had to remind the critic, also characterizes the historian's situation of historical understanding. All appearances seem to be this, it is true, for historical understanding seems to fall entirely on the traditional text's claim to applicability. We have seen that the text does not regard a text in terms of the text's intention but in terms of its own characteristic and different intention—that is, as a historical event, using it to understand what the text did not at all intend to say but that nevertheless find expressed in it.

Closer examination, however, the question arises whether the text's understanding is really different in structure from the critic's. It is as if he considers the texts from another point of view, but this point of view applies only to the individual text as such. For the critic, however, the individual text makes up, together with other texts and testimonies, the unity of the whole tradition. The whole tradition is his true hermeneutical object. It is this that he must understand in the same sense in which the literary critic understands his text as the unity of its meaning. Thus the historian too must perform a task of interpretation. This is the important point: historical understanding proves itself to be a kind of literary criticism writ large.

This does not mean that we share the hermeneutical approach of the natural sciences. The problems of which we outlined above. We spoke of the dominance of the philological schema in historical self-understanding and Dilthey's foundation of the human sciences to show that the historical school's aim of seeing history as reality and not simply as the playing complexes of ideas could not be achieved. We, for our part, are remaining, with Dilthey, that every event is as perfectly meaningful event. When I called history criticism writ large, this did not mean that historical studies are to be understood as part of intellectual history (Geschichte).

I am saying just the opposite. We have seen, I think more correctly, what happened in reading a text. Of course the reader before whose eyes the book of world history simply lies open does not exist. But neither does the reader exist who, when he has his text before him, simply reads into there. Rather, all reading involves application, so that a person reading a text is himself part of the meaning he apprehends. He belongs to the text that he is reading. The line of meaning that the text manifests to him reads it always and necessarily breaks off in an open indeterminacy. He can, indeed he must, accept the fact that future generations will read and understand differently what he has read in the text. And what is true of the reader is also true of the historian. The historian is concerned with...
the whole of historical tradition, which he has to mediate with his present existence if he wants to understand it and which in this way keeps open for the future.

Thus we too acknowledge that there is an inner unity between philosophical criticism and historical studies on the one hand and historical tradition on the other, but we do not see it in the universality of the historical method, nor in the objectifying displacement of the interpreter by the original reader, but in historical critique of tradition as such but, on the contrary, in the historical interpretation both perform an act of application that is different only in degree. The philologist or critic understands the given text—i.e., understands himself in the text in the way we have said—the historian too understands a great text of world history he has discovered, in which every text handed down to us is but a fragment of meaning. One letter, as it were, he understands himself in this great text. Both the critic and the historian thus emerge from the self-forgetfulness to which they had been brought by a technique of which the only criterion was the methodology of science. Both find their true ground in historically effected consciousness.

This shows that the model of legal hermeneutics was, in fact, the one. When a judge regards himself as entitled to supplement the meaning of the text of a law, he is doing exactly what takes place in other understanding. The old unity of the hermeneutical disciplines comes into its own again if we recognize that historically effected consciousness is at work in hermeneutical activity, that of philologist as well as of the historian.

The meaning of the application involved in all forms of understanding is now clear. Application does not mean first understanding a given unit in itself and then afterward applying it to a concrete case. It is the understanding of the universal—the text—itself. Understanding provides a kind of effect and knows itself as such.

3 ANALYSIS OF HISTORICALLY EFFECTED CONSCIOUSNESS

(A) THE LIMITATIONS OF REFLECTIVE PHILOSOPHY

We must now ask how knowledge and effect belong together. We have already pointed out above that historically effected consciousness is something other than inquiry into the history of a particular fact. It is an effect—as it were, the trace a work leaves behind. It is, rather, the consciousness of the work itself, and hence itself has an effect. The whole account of the formation and fusion of horizons was to show historically effected consciousness operates. But what sort of consciousness is this? That is the decisive problem. However much we may believe that historically effected consciousness itself belongs to the past, what is essential to it as consciousness is that it can rise above that it is conscious. The structure of reflexivity is fundamentally given by consciousness. Thus this must also be the case for historically effected consciousness.

It might also express it thus: when we speak of historically effected consciousness, are we not confined within the immanent laws of reflection which destroy any immediate effect? Are we not forced to admit that we must regard the basis of hermeneutics as the absolute and historicity of history and truth?

We cannot underestimate this point if we think of the historical theory of knowledge and its development from Schleiermacher to Dilthey. It was everywhere. Everywhere the claim of hermeneutics seems capable of application not only in the infinity of knowledge, in the thoughtful fusion of the past with the present. We see it based on the ideal of perfect understanding, on the complete limitation of our historical horizon, on the recognition of our finiteness in the infinity of knowledge, in short, on the incogitability of the historically knowing spirit. It is clearly of no fundamental significance that nineteenth-century historicism never expressly acknowledged this consequence. Ultimately it finds its justification in the awareness even if the historians, filled with enthusiasm for experience, seem to quote Schleiermacher and Wilhelm von Humboldt. But since Schleiermacher nor Humboldt really thought through their position properly. However much they emphasize the individuality, the barrier of experiences, that our understanding has to overcome, understanding ultimately finds its fulfillment only in an infinite consciousness, just as the individuality finds its ground there as well. The fact that all hermeneutical truth is pantheistically embraced within the absolute is what makes the miracle of understanding. Thus here too being and knowledge can determine each other in the absolute. Neither Schleiermacher's nor Humboldt's Kantianism, then, affirms an independent system distinct from the critique of speculative philosophy that applies to Hegel applies to Schleiermacher as well.

We must ask whether our own attempt at a historical hermeneutics is subject to the same critique. Have we succeeded in keeping ourselves
